Dr. Anuradda Ganesh Chief Technical Advisor, Cummins, India

An engineer at heart, I believe in using science and technology as a catalyst for social development at the grass-root level, particularly for women empowerment. I believe we can touch lives of people coming from every walk of life.

Empowering my mother, my Rotarian friends, rural women - all have been extremely satisfying and fulfilling. As a practitioner of STEM, it helps me translate my vision into reality and innovate for benefitting communities. STEM gave me with the freedom of choice and hence I made informed choices.

All these experiences have been pivotal in honing my intellectual curiosity to question the assumptions, learn and adapt to the constantly changing environments. STEM helps in structured approach and above all, provides a basis for incorporating sustainability in every aspect of life.

An initiative by The Pune Knowledge Cluster, which aims to bring forward the journey of women in various fields of Science, Technology, Engineering & Mathematics (STEM). This series is conducted in an informal conversational format to help the audience relate to the lives of successful women professionals in S&T, knowing first-hand about their success stories, their failures, and how they moved ahead to make a mark in their field. We hope this initiative will inspire young women to break gender stereotypes, societal barriers and encourage them to pursue careers in STEM.
