

From Zero to ChatGPT

ChatGPT is next in the series of GPTs (Generative Pre-trained Transformers) coming from OpenAI. They are based on a revolutionary architecture called 'Transformers', initiated by Google.

Transformers are based on one of the popular neural network architectures, called 'Encode-Decoder' networks, typically used for Language Modeling (predicting the next word) or Machine Translation.

The speaker will cover introduction to basic prerequisites such as Artificial Intelligence, Machine Learning, Deep Learning, Natural Language Processing, Word Embeddings, Transformers and introduction to ChatGPT, its applications, advantages and disadvantages.
